

A Learning Session at Pratt & Whitney Canada

Better...faster...cheaper...The challenges facing Canadian companies.

Lean at Work

The Learning Session at Pratt & Whitney Canada will demonstrate 'Lean at Work' at a leading Canadian manufacturer. Hear about Lean Consortium as a leveraged networking opportunity. Learn about how other companies have embraced lean to drive out waste and drive up customer value!

By adopting Lean, companies have:

- Increased productivity by 40%
- Reduced their defect rate from 3% to 1.5%
- Reduced their Work in Progress of \$1 million with a 40% lead-time decrease
- Reduced plant floor space requirement by 50% - 75%

Terry Green, Quality Manager, Pratt & Whitney Canada

Will describe how Pratt & Whitney Canada have embraced Lean through their ACE program, and explain in detail the tools used to successfully implement Lean.

Terry and his team will provide an on-site tour of Lean at Work in both a service support department, and a manufacturing line.

Lean Consortium

In the afternoon, CME will set the stage for a Nova Scotia based Lean Consortium of independent firms pursuing excellence through continuous improvement. Through the sharing of knowledge, resources, best practices and expertise, companies have access to professional consulting services, targeted Lean training and networking opportunities.

David Haire, VP of Best Practices and Lean Management, CME Atlantic Region, who also leads the Fluent Consortium in Newfoundland and Labrador, will share Lean success stories in Atlantic Canada.

Agenda for the Day

8:45 am	Participants arrival
9:00 am	Welcome and introductions
