[Quantum5x Systems Inc.](#)

The QT-256wp is the world's smallest wireless transmitter. There's nothing else like it anywhere. And for a product no bigger than an eraser, it's capturing attention of global proportions.

Created by Quantum5x Systems of London, Ontario, the QT-256wp provides reliable, broadcast-quality sound - and it's waterproof! It's ideal for security and military applications and is in use by broadcasters and performers around the world.

It is so small that it can be hidden easily, and it is ideal for extreme conditions. Listen to a Major League Baseball broadcast or an NBA game and you may hear the QT-256wp. The NHL and the CFL use it. Broadcasters, theatre actors, athletes, the military and medical practitioners alike love the tiny but powerful transmitter.

Quantum5x Systems, as a result of the QT-256wp, is expanding its operations - a boost to the London economy.

For creating a quality product that has so many varied applications around the world, Quantum5x systems received the award for New Product Design and Commercialization the Canadian Innovation Awards.
